QUICKSILVER, kwîk'sîlvâr, s. [quick and silver.] *Quicksilver*, call'd mercury by the chymists, is a naturally fluid mineral, and the heaviest of all known bodies next to gold; its nature is so homogeneous and simple, that it is a question whether gold itself be more so; it penetrates the parts of all the other metals, renders them brittle, and in part dissolves them: it is wholly volatile in the fire, and may be driven up in vapour by a degree of heat very little greater than that of boiling water: it is the least tenacious of all bodies, and every smaller drop may be again divided by the lightest touch into a multitude of others, and is the most divisible of all bodies: the specific gravity of pure mercury is to water as 14020 to 1000: the ancients all es-

seemed quicksilver a poison, nor was it brought into internal use till about two hundred and twenty years ago, by the shepherds, who ventured to give it to their sheep to kill weeds, and as they received no hurt, it was soon concluded that man might take it safely: in time, the diggers in the mines, when they found it crude, swallowed it in vast quantities, in order to sell it privately, when they had voided it by stool: but so powerful a medicine cannot be always used without danger. *Hill*.

WA' TER, wâ'têr, s. [wâter, Dutch; pœ'tep, Sax.]

—1. Sir Isaac Newton defines water, when pure, to be a very fluid salt, volatile, and void of all savour or taste. It seems to consist of small, smooth, hard, porous, spherical particles, of equal diameters, and of equal specific gravities, as Dr. Chayne observes. Their smoothness accounts for their sliding easily over one another's surfaces; their sphericity keeps them also from touching one another in more points than one; and by both these their frictions in sliding over one another is rendered the least possible. Their hardness accounts for the incompressibility of water, when it is free from the intermixture of air. The porosity of water is so very great, that there is at least forty times as much space as matter in it. *Quincy. Shaks*.—2. Th. s-a. *Com. Prayer*.—3. Urine. *Shaks*.—4. To hold WATER. at other times more obscure and of a purple colour.

At hand, it shines less than at a distance. They
are more frequent in places uncultivated, marshy,
and abounding with reeds. They hunt burning places,
pieces of execution, and dunghills. They com-
monly appear in summer, and at the beginning of
autumn, at the height of about six feet. They
follow those that run, and fly from those that fol-
low. Some that have been caught consist of a
slimy viscus matter, like the spawn of frogs,
not hot, but only shining; so that the matter
seems to be phosphorus, raised from putrefied
plants or excrements.

Book

The background of the entire page is a black and white marbled paper pattern, featuring intricate, organic, vein-like shapes that resemble stone or biological tissue. The pattern is dense and covers the entire surface.

This book was rebaked using the original boards. Canapetta bookcloth was used on the spine and corners and marbled paper was used for the endsheets. Bugra paper was used as a buffer between the endsheets and textblock. May 2001
